

ABRA Update #45 – September 9, 2015

FERC Staff Comments on ACP Draft Plan

The staff of the Federal Energy Regulatory Commission has responded to the July 27 filing by the Atlantic Coast Pipeline on a series of draft plans required by the agency on: 1) Karst Terrain Assessment, Construction, Monitoring and Mitigation; Spill Prevention, Control and Countermeasures; Blasting ; Winter Construction; and Invasive Plant Species Management. The comments make 38 separate requests for further information or clarifications from ACP, nearly half of which concern the draft plan on Invasive Plant Species Management. The September 3 FERC letter, written to Dominion Transmission Inc. as the management agent for the ACP, is available on the ABRA website at http://abralliance.org/wp-content/uploads/2015/09/FERC_Comments-ACP_Plan-Karst_Terrain_Assessment_Construction_Monitoring_Mitigation_9-4-15.pdf.

Virginia DCR Makes Recommendations on Pipeline Alternatives

The Virginia Department of Conservation and Recreation (DCR) wrote FERC on September 4 to comment upon and make recommendations regarding the potential alignment of the Atlantic Coast Pipeline as it could relate to the recreational and environmental programs it administers in the state. Most of the DCR comments relate to proposed ACP alternatives in the portion of the route. The DCR letter is available at http://abralliance.org/wp-content/uploads/2015/09/VA_DCR_comments-ACP_9-4-15.pdf.

Drillers and producers scaling back amid harsh market and financial environment

Fasten Your Seatbelt - Natural Gas Is Ready To Blast Off

- Seeking Alpha – 9/4/15

<http://seekingalpha.com/article/3490636-fasten-your-seatbelt-natural-gas-is-ready-to-blast-off>

Takeaway...drilling curtailment, reduced availability of cheap debt, high well decline rates = less gas -> higher prices -> less likelihood of profit from LNG export & higher power production costs for rate payers.
