

ABRA Update #31 – June 3, 2015

ABRA Policy on ACP Approved

A policy position opposing the announced routes that have been proposed for the Atlantic Coast Pipeline has been approved by the Steering Committee of the Allegheny-Blue Ridge Alliance. Voting representatives of ABRA members were sent the policy on June 1 and invited to have their organization's name listed on the policy. It will be sent June 9 to the press, the Federal Energy Regulatory Commission and other key public officials. A copy of the policy is available on the ABRA website at <http://abralliance.org>.

The policy states that the various routes that have been discussed by the Atlantic Coast Pipeline "are not in the best interest of the public good of the affected communities and citizens of Virginia and West Virginia." The statement goes on to cite reasons why a pipeline should not be constructed along the proposed routes, including:

- Threatening the integrity and safety of water supplies;
- Safety risks that would result from building a pipeline over karst topography;
- Harm to the habitat of many protected species of plants and animals in the region;
- Adverse impacts on the economies and livelihoods of affected communities;
- Compromising intended uses of public lands and National Forests; and
- Endangering the structural character of mountain terrain due to long-term erosion.

The statement also calls for the Federal Energy Regulatory Commission to "conduct a programmatic Environmental Impact Statement (PEIS) that assesses the full range of adverse effects of the pipeline and evaluates all reasonable, less damaging alternatives. The PEIS should examine the need for and impacts of the pipeline in the context of the numerous natural gas infrastructure projects proposed for the region and the rapidly increasing competitiveness of clean, renewable sources of energy."

Members of ABRFA that wish to be listed as supporting the policy must indicate so by contacting ABRA Chair Lew Freeman at lewfreeman@gmail.com.
