ABRA Responds to Hampton Roads Caucus

The Allegheny-Blue Ridge Alliance (ABRA) has responded to the March 11, 2016 letter of support for the Atlantic Coast Pipeline sent by members of the Hampton Roads Caucus to U.S. Senators Mark Warner and Tim Kaine. Thirty-three members of a Virginia state legislative caucus, representing districts in the southeastern region of the state, said that: “The need for this project is urgent; to put it bluntly, our region’s natural gas transportation system has reached a tipping point.”

In a March 29 letter to Senators Warner and Kaine, Thomas Hadwin of Friends of Shenandoah, a former utility executive and writing on behalf of ABRA, pointed out that “natural gas can be supplied to the Hampton Roads region more quickly, at lower costs, and without disrupting public and private land in Virginia, by using existing pipelines.” Continuing, he said:

The Columbia Gas pipeline network, which crisscrosses Virginia, connects to the Virginia Natural Gas pipeline that currently serves the Hampton Roads area. The WB XPress project will expand the capacity of the Columbia Gas system in West Virginia and Virginia by 1.3 billion cubic feet per day of natural gas, nearly equal to the amount proposed by the ACP.

The 77-mile, 20-inch pipeline constructed on new right-of-way from the Hampton Roads region into North Carolina that is proposed by the ACP would not be required. The residents in the Hampton Roads area would have access to greater supplies of natural gas, more cheaply, with far less disruption of Virginia land and communities, sooner than they would if they depended on the Atlantic Coast Pipeline. If the members of the General Assembly who wrote to you were aware of this option, they might realize that it is a superior answer to their concerns.

A copy of Tom’s letter is on the ABRA website.

New FERC Staff Markets Study: Natural Gas Supply Exceeds Demand

The staff of the Federal Energy Regulatory Commission (FERC) presented to the agency’s Commissioners on March 17 the annual State of the Markets Report for 2015. The report noted that natural gas “production and storage reached record levels, while demand rose modestly, tempered by the El Niño warm weather during the 2015-2016 winter.” Among highlights in the staff presentation:

- “Non-winter process fell to their lowest levels in 20 years.”
- “Insufficient pipeline takeaway capacity in WV, OH and PA led to a local gas surplus in the area, resulting in lower prices for producers.”
- “Staff analysis indicates that new capacity additions should significantly relieve transportation constrains . . . by 2019 if projects that are planned and under construction are approved and completed by the scheduled in-service dates.”
• “The outlook for 2016 continues to point to low prices because of continued strong production and high storage.”
• “The North American natural gas market will likely remain oversupplied and prices low in the near term, pushing high cost producers out of the market.”
• “Long term demand growth for U.S. natural gas will likely come from increased gas-fired electric generation, particularly in the Southeast, growing industrial demand, LNG exports, and pipeline exports to Mexico.”
• “It is difficult to predict the volume of LNG exports in coming years because falling global prices have made potential U.S. exports less profitable.”

Last year’s FERC staff presentation on State of the Markets for 2015 is available [here](#).

**New ABRA Members**

We are pleased to welcome two new members of ABRA:

- Voices of Bath – Mary Hodges, voting representative
- Friends of Central Shenandoah – Thomas Hadwin, voting representative

---

**Energize, Equip and Empower!**

ABRA's next membership-wide meeting will be Saturday, April 23, 10 am to 3 pm at the Weyer’s Cave Community Center, Weyer’s Cave, VA, located 15 minutes north of Staunton, just off of I-81. An agenda and registration information will be sent within the next week in a special mailing. Featured on the program will be presentations on new pipeline economic studies, in depth examination of grass roots experiences and how we can improve our capabilities and enhancing our messages to public officials and the general public.
