Final EIS Due to be Released by FERC on Friday

The Final Environmental Impact Statement (FEIS) for the Atlantic Coast Pipeline (ACP) is expected to be released first thing Friday morning, July 21 by the Federal Energy Regulatory Commission (FERC). A Draft Environmental Impact Statement (DEIS) was released December 30 and was the subject of extensive comments and public hearings. ABRA produced an extensive review of the DEIS (available on the [ABRA website]), pointing the extensive shortcomings, missing information and erroneous conclusions.

ABRA will be posting a link on our website to the FEIS on Friday morning and will be issuing a statement to the media. We will also be sending to all recipients of ABRA Update a copy of our press release and a link to the FEIS.

The FEIS is generated by the FERC staff and is one of the major inputs into the decision-making process for the ACP. The decision by the sitting FERC commissioners on whether to issue a permit for the ACP is scheduled to be made by October 19. However, if that timetable is to hold, it will be necessary for the U.S. Senate to confirm pending nominations for two new FERC commissioners since the 5-member body is down to one sitting member; three members constitute a quorum. It is not clear at this writing when the Senate will take up pending nominations of four newly named commissioners (see story below). And, even if the new FERC members are confirmed before the planned congressional recess in August, it is not clear how long it will take the newly reconstituted Commission to get through the backlog of decisions awaiting action since the body lost its quorum earlier this year with the resignation of Commissioner Norman Bay. Both factors could influence the timing of the ACP permit decision.

Virginia DEQ Posts Info on Erosion & Stormwater Plans for ACP and MVP

Plans for erosion and sediment control, as well as for stormwater management, for the Atlantic Coast Pipeline and the Mountain Valley Pipeline were made available this week on the website of the Virginia Department of Environmental Quality (DEQ). The [posting on the DEQ website] states:

Virginia state law and regulations establish that land disturbance associated with pipeline construction activities must meet Erosion and Sediment Control (ESC) and Stormwater Management (SWM) requirements to protect surface water quality during and after construction completion. State law further mandates that natural gas pipeline utilities (and certain other utilities) meet the requirements for ESC and SWM under a DEQ approved Annual Standards and Specifications Program.

Please support ABRA’s important work by clicking here.
Under the required Annual Standards and Specifications Program utilities are not required to submit site specific ESC and SWM plans to DEQ for approval. However, as an additional measure to ensure protection of state waters DEQ has required the Atlantic Coast Pipeline (ACP) and the Mountain Valley Pipeline (MVP) projects to submit their site specific ESC and SWM plans to DEQ for review and approval.

ACP and MVP site specific ESC and SWM plans will address every foot of land disturbance related to pipeline construction, including access roads and construction lay-down areas.

The DEQ has previously stated it will review those plans (stormwater management and erosion and sediment control plans) separately from its review under the Clean Water Act Section 401. As a result, the State Water Control Board’s decision whether to certify that construction of the Atlantic Coast Pipeline will not harm state waters will not be informed by the essential details that the erosion and runoff control plans should provide. This is a concern that ABRA and many of its members have voiced to DEQ and the Water Control Board.

New FERC Chairman Named by President Trump

Kevin J. McIntyre, an energy attorney in Washington, has been named as the new Chairman of the Federal Energy Regulatory Commission (FERC). The June 13 White House announcement states:

Kevin J. McIntyre of Virginia to be a Member of the Federal Energy Regulatory Commission, for the term expiring June 30, 2018, and an additional term expiring June 30, 2023, and upon confirmation, shall be designated Chairman. Mr. McIntyre is the co-leader of the global Energy Practice at the law firm Jones Day, where he has practiced law for most of his nearly 30-year legal career. A graduate of San Diego State University and Georgetown Law, Mr. McIntyre is a recognized leader in the United States energy regulatory arena, with an expansive Federal Energy Regulatory Commission practice representing clients in all industry sectors—natural gas, conventional electricity, oil, hydropower, wind power and other renewable resources, and energy marketing and trading. His work for energy clients spans administrative and appellate litigation, compliance and enforcement matters, and corporate transactions. Mr. McIntyre is active in energy industry, legal, and educational organizations, as well as in his local community. He lives in Arlington, Virginia, with his wife Jennifer and their three young children.

McIntyre will replace as chairman Cheryl LaFleur, the only currently sitting commissioner, who has been serving as Acting-Chairman but will continue as a FERC member. The McIntyre announcement marks the 4th appointment to the 5-member commission by President Trump. Neil Chatterjee and Robert Powelson were nominated to the Commission on May 10 and are awaiting a confirmation vote by the Senate (see ABRA Update #129 for their background). On June 28, the President announced his intent to nominate as a Commissioner Richard Glick, a Democrat, who is currently General Counsel of the Senate Energy and Natural Resources Committee. At this writing, paperwork on Mr. Glick’s appointment has not yet been sent to the Senate for his nomination to be considered by the Energy and Natural Resources Committee. Details about Mr. Glick are here.
