New Study Says ACP and MVP Present Serious Threats to Drinking Water

“Numerous environmental risks associated with pipeline construction and operation present direct threats to groundwater resources,” according to a study released this week by the Natural Resources Defense Council. The study, *Threats to Groundwater from the Mountain Valley Pipeline and Atlantic Coast Pipeline in Virginia*, was conducted by Downstream Strategies of Morgantown, WV. The study assessed the impact the two pipeline projects would have on private drinking water wells and springs in Virginia. Among study’s findings and recommendations are:

- Pipeline construction and operation present serious threats to underground sources of drinking water via soil compaction and excavation, surface spills of diesel and other petrochemicals, blasting and trenching, alterations of topography, exposed geology, hydrostatic testing, sinkhole filling and development, and drilling.

- In Virginia, approximately 2 million people rely on groundwater resources for drinking water.

- Baseline testing plans for both water quantity and quality, for both the ACP and MVP, are inadequate to protect drinking water sources, and do not match best management practices.

- To ensure protection of groundwater resources in non-karst areas, testing of private water wells should be expanded beyond the current 150-foot limit.

- To ensure protection of groundwater resources in karst areas, testing of private water wells and springs should be expanded beyond the current distance limits.

- The karst mitigation plans for both pipelines are inadequate.

**U.S. Army Corps Asked to Suspend ACP’s Permit**

Several ABRA member groups and others have requested the Army Corps of Engineers to “immediately notify Atlantic Coast Pipeline, LLC (‘Atlantic’) that authorization of construction of river, stream, and wetland crossings for the Atlantic Coast Pipeline under the Corps’ Nationwide Permit 12 is suspended pending the re-initiation and completion of
Section 7 consultation under the Endangered Species Act (‘ESA’).” The June 1 letter, sent by Southern Environmental Law Center, Appalachian Mountain Advocates and the Chesapeake Bay Foundation on behalf of their respective clients, noted that as a result of the Fourth Circuit Court of Appeals’ May 15 decision vacating the U.S. Fish and Wildlife Service’s Incidental Take Statement for the Atlantic Coast Pipeline, the “Corps’ consultation obligations for the project under Section 7 of the Endangered Species Act are incomplete, and construction must not proceed until the defects of the Incidental Take Statement are resolved.”

Continuing, the letter argues:

Atlantic continues to make public statements and filings to FERC indicating it is pushing forward with pipeline construction. Therefore, prompt action by the Corps to suspend Nationwide Permit 12 authorization is necessary to meet the requirements of the ESA, Corps’ regulations, and Nationwide Permit 12, and to and prevent illegal harm to listed species. Should the Corps ignore these requirements and allow Atlantic to proceed with pipeline construction, the agency risks running afoul of the ESA’s prohibition on the “irreversible or irretrievable commitment of resources” during consultation and incurring civil and criminal liability should listed species be taken.

CSI Has New Online Incident Reporting Form Available

ABRA’s Compliance Surveillance Initiative program now has a convenient online form available for reporting observations of pipeline construction noncompliance and pollution incidents. The form which was developed in consultation with the West Virginia Rivers Coalition, Trout Unlimited and the Mountain Valley Watch, provides a convenient way to submit reports, including photos, for not only the Atlantic Coast Pipeline, but the Mountain Valley Pipeline and other pipeline projects. The form is available on the CSI website (click here). Incidents of pipeline non-compliance can still be reported by email to csi@abralliance.org or to ABRA’s hotline (877-GO2ABRA or 877-462-2272.

Status of: DEQ Website Status, NWP 12 Comment Period, Water Board Meeting

The Virginia Department of Environmental Quality (DEQ) website which has been down since May 22, was due to operational again by June 1 (though as of 3 pm on June 1, it was not). As a result, the DEQ has indicated it will extend the comment period for receiving public input on the adequacy of the U.S. Corps of Engineers’ NWP 12 permit for the Atlantic Coast Pipeline and the Mountain Valley Pipeline. A new deadline will be announced as soon as the website is back up and we will advise you of that by email.

In the meantime, the next regular meeting of the State Water Control Board, which had been scheduled for June 11, has been cancelled and will rescheduled for August 21 in Richmond. Stay tuned!

A radical US startup has successfully fired up its zero-emissions fossil-fuel power plant

- Quartz – 5/31/18

The theory is sound. It should work. But a whole new generation of gas-fired power plants does nothing to stem the leakage of methane in the production and distribution system, or the destruction and injustice create by natural gas extraction. And storage/beneficial use of millions of tons of CO2 each year is still a tough nut to crack.
