Forest Service Proposes Limiting Public Comments in NEPA Reviews

A proposal by the U.S. Forest Service (NFS) would severely limit the opportunities for the public to comment on environmental analysis conducted by the agency in accordance with requirements of the National Environmental Protection Act (NEPA). The proposed public comment restriction is part of a proposed rule by the NFS “to increase efficiency in its environmental analysis.” Public comments on the proposed rule are due August 12.

In an op-ed in the August 8 New York Times entitled “Why is the Forest Service Trying to Evade the Public?”, Sam Evans of the Southern Environmental Law Center argued:

The law requires every government agency to look for less harmful ways of meeting its goals. To that end, agency decisions must be based on solid science and made in the sunlight of public accountability. Each federal agency has some leeway to implement the law, but the Forest Service’s newly proposed rules would instead circumvent it, creating loopholes for logging projects, road construction and even permits for pipelines and other utilities.

By eliminating the opportunity for public comment, the Forest Service is abandoning the chance to get meaningful advice for free. In the short run, the proposal will be bad for forest users, bad for wildlife and bad for local economies that depend on recreation. In the long run, it will hurt timber economies too. The public tolerates commercial logging on public lands only because passionate forest advocates have found ways, working with industry representatives and agency professionals, to minimize harm and even to harness logging for ecological good. If the Forest Service abandons the process that makes this possible, it will undermine the cooperation that allows us to share our public lands.

ABRA Update readers are urged to submit comments about this wrong-headed proposal by clicking on OurForestsOurVoice.org. The process is simple and straightforward. Be sure to act by Monday, August 12, 2019.

Halt to Future ACP Construction Requested in Wake of FWS Court Decision

Construction of the Atlantic Coast Pipeline (ACP) should be prohibited because of the July 26 decision by the Fourth Circuit Court of Appeals to vacate the biological opinion (BiOp) and incidental take statement (ITC) issued by the U.S. Fish and Wildlife Service (FWS) for the project. The request was made in a July 31 letter to the Federal Energy Regulatory Commission (FERC) from the Southern Environmental Law Center (SELC), which represented plaintiffs in the FWS case.
SELC’s cited four reasons for urging FERC to issue an order halting future construction of the ACP:

- The Commission may not authorize any action that is likely to jeopardize the continued existence of an endangered species. The Fourth Circuit decision found arbitrary and capricious FWS’s conclusion that the ACP would not jeopardize two endangered species: the rusty patched bumble bee and the clubshell mussel.

- In permitting construction, the Commission risks taking species in violation of the Endangered Species Act. Although FWS may allow the incidental take of a limited number of animals in connection with a no-jeopardy biological opinion for that species and an incidental take statement, those authorizations for the ACP have now been vacated.

- Allowing construction of pipeline facilities that might have to be relocated or abandoned risks unnecessary environmental harm. If FWS concludes that the ACP will jeopardize either the rusty patched bumble bee or the clubshell, the proposed pipeline route may have to be modified to avoid the endangered species.

- The Commission cannot permit construction where Atlantic lacks federal authorizations that are mandatory conditions of its certificate. Following the Fourth Circuit’s decision, seven federal authorizations that are mandatory conditions of FERC’s Certificate Order for the ACP have now been vacated or suspended.

The FWS is now charged with issuing a new BiOp and ITC for the ACP. After FWS’s first permit for the project was struck down by the Fourth Circuit in August 2018, the agency reissued a second BiOp and ITC in less than three weeks. In its July 26 opinion, the Fourth Circuit strongly criticized FWS for its rush to issue new approvals for the project. It remains to be seen whether the agency will heed that admonishment.

**Opposition Voiced Against Corps of Engineers Permit Modifications**

The West Virginia Rivers Coalition and 22 other organizations (including ABRA and several of its members) filed comments on July 26 with the West Virginia Department of Environmental Protection’s (WVDEP) proposed modification of Nationwide Permit 12 (NWP 12), the permit program that governs the conditions by which projects like the Atlantic Coast Pipeline can cross rivers and streams. The comments state:

We oppose the WVDEP’s modifications to NWP 12 special conditions, which weaken protections for over 500 of West Virginia’s rivers and streams proposed to be crossed by the Atlantic Coast Pipeline and the Mountain Valley Pipeline. We urge the Corps to decline WVDEP’s request to modify the 401 State Water Quality Certification of the Army Corps of Engineers NWP 12.

The WVDEP’s modifications are unnecessary. WVDEP has the authority now to permit large pipeline construction projects coverage using individual 401 Water Quality Certifications. Instead of following through with the proposed modifications that weaken protections for rivers and streams, WVDEP can use individual 401 Water Quality Certifications to provide stream and wetland protections tailored to each project. Army Corps must deny WVDEP’s modifications which attempt to make it easier to permit large pipeline construction projects when they cannot meet existing regulations.
Wild Virginia to Sponsor Camping Trip Along the ACP Route

Wild Virginia is sponsoring an overnight trip on August 24th-25th that will explore some special areas along the proposed Atlantic Coast Pipeline route in Bath County. The event will involve a tour and camping on the property of Bill and Lynn Limpert on August 24th, and a visit to Fort Lewis Lodge and Farm on August 25th. The trip will highlight the effects pipeline construction will have on the area. To learn more and sign up to participate, visit https://www.facebook.com/events/456314581615063/

“This is clearly a case of great importance, not only to West Virginia but to national energy policy and this country’s economic future.” I think this misses the mark, for several reasons. Proper due diligence could have avoided most of the legal issues. What’s at stake is bigger than a couple thousand temp jobs and a few million in tax receipts. And, tying this country’s economic future to oil and gas extraction is dangerous to the point of stupidity.

Independent Analysis Fails to Find Convincing Evidence that Mountain Valley Pipeline Southgate is Needed
Appalachian Voices – 8/1/19
http://appvoices.org/2019/08/01/independent-analysis-fails-to-find-convincing-evidence-that-mountain-valley-pipeline-southgate-is-needed/
Applied Economics Clinic (AEC), a nonprofit consulting group, published an analysis finding that neither the builder nor the anchor customer of the proposed Mountain Valley Pipeline Southgate extension project have provided “convincing evidence of a need for MVP Southgate.”
